Successful Implementation

Customer requested all users group those who are in o 365 have to be covered under this Solutions. This was a challenge as VMware Workspace one has to be integrated to Azure AD or Active Directory and Torry Harris having two domain and they don not want to add their domain for this solution. Hence Ninth Dimension have come up with a new solutions to address this challenge to whitelist the power users and other users for both Windows laptops and Mobile devices. More than two thousand users are onboarded successfully into this solutions.

Outcome

After successful implementation customer looking for another two thousand device to be implemented in next phase.

Conclusion :

Mobile Device Management (MDM) enabled IT admins to securely monitor and manage the mobile devices business data. Including storing essential information about mobile devices, deciding which apps can be present on the devices, locating devices, and securing devices if lost or stolen.
